Solution Series™
By Madico

Madico View Control films change between transparency and translucency as the viewing angle changes. View control films can be used in a variety of ways in order to hide an object from view or highlight another. Create privacy from certain angles on glass conference rooms, partition walls, windows and other applications. View Control films can also be used to create visual effects in showrooms, museums and retail spaces.

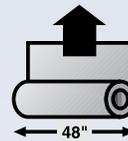

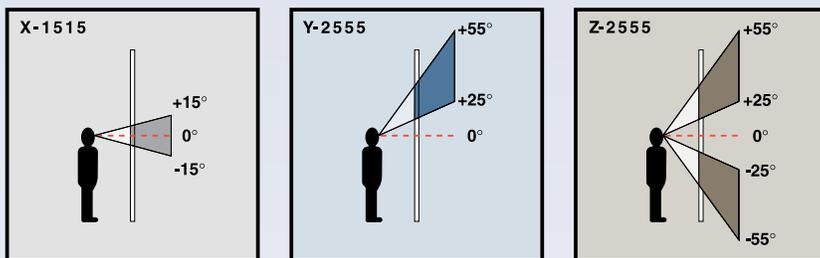

| Type	Type of translucency (type of structure)	Invisible range	Thickness
X-1515	Front translucent (single)	−15° ~ +15°	.2mm
Y-2555	Uniangle-range translucent (single)	+25° ~ +55°	.2mm
Z-2555	Biangle-range translucent (double)	±25° ~ ±55°	.4mm

Roll width: 48" (1,250 mm)
Roll length: 50' (15m)

Examples of sight lines of Madico View Control films.

The figures below illustrate the vertical use of View Control film.

The figures below illustrate the horizontal use of View Control shown from an overhead perspective.

Shaded areas are translucent.
